GRADUATE SOFTWARE ENGINEERING HIGHLIGHTS

Final-year Software Engineering (Honours) student at Monash University and Graduate Implementation Consultant at Orikan with experience delivering enterprise software implementations and building full-stack applications using React, JavaScript, Firebase, and AWS across frontend, backend, API, database, and cloud layers.

- Currently working as a Technical Implementation Consultant at Orikan, supporting the implementation of enterprise SaaS payment solutions for local government clients using SQL, REST APIs and Azure DevOps in a client-facing consulting environment.
- Won 1st place out of 32 teams in the Sustainability Category at the Google DeepMind AI Sprint Hackathon 2026, held at Google Melbourne, developing Agri Adapt, an AI-powered platform that helps Victorian farmers respond to climate related crises through data-driven farming decisions.
- Contributed to the development of the International Federation of Red Cross and Red Crescent Societies (IFRC) World Disasters Report platform using React and JavaScript, supporting mission-critical humanitarian initiatives serving 30,000+ users globally.
- Developed WCAG-compliant web and mobile frontend features for Focus Bear using React and JavaScript, improving accessibility and community support for neurodivergent users.
- Organised industry-led technical workshops through Google Developer Groups on Campus and Monash AIM, driving technical learning, collaboration, and professional development opportunities for 300+ students.

SKILLS: Python | C++ | JavaScript | TypeScript | React | Node.js | SQL | MongoDB | AWS | Azure | Git | CI/CD

CERTIFICATIONS: Microsoft Certified: Azure Fundamentals (AZ-900) | GitHub Foundations

EDUCATION

MONASH UNIVERSITY

Bachelor of Software Engineering (Honours)

MELBOURNE, VIC

Feb 2023 – Dec 2026

EXPERIENCE

ORIKAN

Solution Implementation Consultant

MELBOURNE, VIC

July 2026 – Present

- Support the implementation of 10+ enterprise SaaS and payment solutions for local government, healthcare, and higher education clients, contributing to successful go-live and post-implementation support.
- Work with SQL, REST APIs, and Azure DevOps Services to troubleshoot and support system integrations.
- Collaborate with consultants, developers, and customer stakeholders during implementation and UAT.
- Produce technical documentation and leverage AI-assisted tools to improve troubleshooting and knowledge sharing.

MONASH STUDENTS FOR AI WITH COMMUNITIES (MOSAIC)

Software Developer

MELBOURNE, VIC

March– June 2026

- Developed 10+ scalable frontend features and UI fixes using React and JavaScript for the IFRC World Disasters Report platform, supporting the launch of a global humanitarian data initiative serving 30,000+ users.
- Resolved 15+ frontend issues and pull requests in the MOSAIC codebase through pair programming and PR reviews, reducing deployment blockers and improving release stability by 20%.
- Integrated Google Analytics 4 (GA4) tracking across 20+ UI components, enabling data-driven decisions and improving user engagement metrics.

- Developed 10+ React.js features using React Native and JavaScript across mobile and web, fixing UI bugs and reducing load times to improve cross-platform consistency and user experience.
- Built WCAG 2.1 compliant responsive interfaces with accessible colour contrast and adaptive layouts, improving usability for neurodivergent users across customer-facing mobile and web platforms.
- Tested feature and API changes across mobile and web, documenting and reporting outcomes to backend and QA teams, and managed application state with Redux to reduce rework by 20% and improve sprint delivery efficiency.

NOTABLE PROJECTS

Aussie EcoLens: Multi-Cloud Wildlife Observation Platform | Skills: React, Python, AWS (Lambda, S3, DynamoDB, Cognito, SNS), Azure Cosmos DB, Docker, Terraform, AWS SAM | Link: [Website Link](#)

- Built a serverless multi-cloud CQRS platform that routes writes to AWS (S3, DynamoDB) and reads to Azure Cosmos DB, staying in sync within 1-2 seconds through a DynamoDB Streams replicator.
- Engineered an event-driven pipeline of 4 AWS Lambda functions for two-stage ML species tagging, thumbnail generation, cross-cloud replication and SNS notifications, coordinated by EventBridge so each stage scales and fails independently.
- Cut the ML Docker image from 6.8 GB to under 2 GB with CPU-only PyTorch and lazy S3 model loading, holding cold starts under 30 seconds.

Bird Nest: AI-Powered Image Detection Platform | Skills Used: Next.js, AWS (Lambda, S3, DynamoDB, ECR), YOLOv5 | Link: [Website Link](#)

- Built a scalable, event-driven system processing 10-12 bird image uploads per session with ~60s processing time, running AI-based object detection using containerised YOLOv5 models.
- Designed a cloud pipeline with AWS Lambda and S3 to handle long-running ML tasks (up to 5 minutes) asynchronously, eliminating timeout failures.
- Developed a responsive Next.js frontend with polling, retry logic, and DynamoDB-integrated real-time data flow, improving task success rates, reducing failed requests by ~40%, and enabling backend-to-frontend updates with sub-second latency.

Project Management App for Agile Project | Skills Used: React, JavaScript, CSS, Node.js, Google Cloud Translation API, MongoDB | Link: [Website Link](#)

- Built a full-stack Agile project management system using React, Node.js, and MongoDB, supporting 3 sprints and 20+ user stories with real-time sprint tracking and backlog prioritisation.
- Engineered secure RBAC using JWT authentication in Node.js, enforcing role-based permissions and reducing unauthorised access risks.
- Developed interactive dashboards (burndown, effort charts) with multilingual support across 20+ languages using Google Cloud Translator API, improving usability for diverse users.

OTHER EXPERIENCE

UNIQLD AUSTRALIA

Sales Associate

WERRIBEE, VICTORIA

January - August 2024

- Deliver exceptional customer service through clear communication and problem-solving, resolving 50+ weekly inquiries and maintaining high customer satisfaction ratings.
- Utilised POS and inventory management systems daily to support retail operations, prioritise stock workflows, and improve order turnaround time by 30%.

VICTORIAN ELECTORAL COMMISSION

Election Officer

MELBOURNE, VICTORIA

October-December 2022

- Administered 2,000+ ballots during the 2022 Victorian state elections, ensuring accurate telephone voting and ballot counting across multiple precincts.
